## Lens Flare Matt Kloskowski

Join Matt as he tells us how to create a dynamic effect out of something most of us try to avoid in our shots!

- **Duplicate** the background (Command/Control-J) twice.
- **Edit > Fill** with 50% gray.
- Change your **Blend Mode** from Normal to **Overlay**.
- **Filter > Render > Lens Flare** (adjust as needed).
- Change your **Blend Mode** to **Multiply**.
- Command/Control-F to **duplicate** your lens flare.
- Wash, Rinse, Repeat!

This a super simple and quick effect to add some drama to a shot.
